

Assignment for QA Automation Engineer

Create a test automation framework using Selenium or Playwright with Java as programming language and automate tests for the below scenarios. BDD with Cucumber is preferred but one is free to create just with TestNG or JUnit as well. It should have support for basic reporting.

Test scenarios –

1. Launch Wikipedia home page (<https://en.wikipedia.org/wiki/Wiki>) and then change language and verify that page is displayed in the selected language, verify it for 10 different languages.
2. Launch Wikipedia home page (<https://en.wikipedia.org/wiki/Wiki>) and then search for 10 different celebrities and log the date of birth and spouse details for each celebrity.
